

# Fender FCK-44 Capacitor Kit for Fender Pawn Shop Excelsior (PR2298) 2012-2015

**Warning:** Tube amplifiers contain high voltage which is stored in the filter capacitors even after the amplifier has been turned off. Always unplug the amplifier from commercial power, and discharge all filter capacitors before working on the amplifier circuitry. If you are unsure about this procedure, we strongly recommend that you leave your amplifier in the care of a professional service person.

A desoldering tool (suction pump) and/or desoldering braid is recommended for desoldering the old capacitors.

Please be certain of the polarity orientation of the new capacitors. On the F&T axial capacitors, the positive end is marked with “ + + + ” next to the specifications on the side of the capacitor. In addition, the cylinder is “dimpled” at the positive end, while it is smooth at the negative end. Finally, the end of the cylinder is black at the positive end, and silver at the negative end.

C12, C26, C28, C29	22uF / 500V (Replaces 22uF/450V)
C32	100uF / 100V
