

# Fender FCK-59 Capacitor Kit for Fender Champion 600 Reissue (2006-2011)

Remember to unplug the amplifier before starting work, and then to discharge the filter capacitors on the main board for safety. If you are uncertain about this, we recommend obtaining the help of a qualified amp technician.

**Very important – tag the transformer wires with small pieces of tape where you can write the terminal locations (printed on the PC board). This is important so that you can put the wires back to the correct location when you reinstall the circuit board.**

Remove the screws holding the PC board in place. Carefully lift up the PC board to access the printed side of the board.

A desoldering tool (suction pump) and/or desoldering braid is recommended for desoldering the old capacitors.

The location of the new capacitors is as follows:

22uF-450V	C4, C5, C6, C7	22uf-50V	C3, C10 (Replaces 22uF-25V)
